

# Full wwPDB NMR Structure Validation Report (i)

#### Feb 26, 2022 – 02:43 PM EST

PDB ID	:	2AU4
Title	:	Class I GTP aptamer
Authors	:	Carothers, J.M.; Davis, J.H.; Chou, J.J.; Szostak, J.W.
Deposited on	:	2005-08-26

This is a Full wwPDB NMR Structure Validation Report for a publicly released PDB entry.

We welcome your comments at validation@mail.wwpdb.org A user guide is available at https://www.wwpdb.org/validation/2017/NMRValidationReportHelp with specific help available everywhere you see the (i) symbol.

The following versions of software and data (see references (1)) were used in the production of this report:

MolProbity	:	4.02b-467
Mogul	:	1.8.5 (274361), CSD as541be (2020)
buster-report	:	1.1.7 (2018)
Percentile statistics	:	20191225.v01 (using entries in the PDB archive December 25th 2019)
RCI	:	v_1n_11_5_13_A (Berjanski et al., 2005)
PANAV	:	Wang et al. $(2010)$
ShiftChecker	:	2.27
Ideal geometry (proteins)	:	Engh & Huber $(2001)$
Ideal geometry (DNA, RNA)	:	Parkinson et al. (1996)
Validation Pipeline (wwPDB-VP)	:	2.27

### 1 Overall quality at a glance (i)

The following experimental techniques were used to determine the structure:  $SOLUTION\ NMR$ 

The overall completeness of chemical shifts assignment was not calculated.

Percentile scores (ranging between 0-100) for global validation metrics of the entry are shown in the following graphic. The table shows the number of entries on which the scores are based.

	Metric	Ranks	Value				
	Clashscore			0			
]	RNA backbone			0.00			
Worse Better							
	Percent	ile relative to all structures					
	Percent	ile relative to all NMR structures					
[	Metric	Whole archive	NMR archive				
	Metric	$(\# { m Entries})$	$(\# {\rm Entries})$				
	Clashscore	158937	12864				
	RNA backbone	4643	676				

The table below summarises the geometric issues observed across the polymeric chains and their fit to the experimental data. The red, orange, yellow and green segments indicate the fraction of residues that contain outliers for >=3, 2, 1 and 0 types of geometric quality criteria. A cyan segment indicates the fraction of residues that are not part of the well-defined cores, and a grey segment represents the fraction of residues that are not modelled. The numeric value for each fraction is indicated below the corresponding segment, with a dot representing fractions <=5%

Mol	Chain	Length	Quality of chain					
1	А	41	100%					

### 2 Ensemble composition and analysis (i)

This entry contains 1 models. Identification of well-defined residues and clustering analysis are not possible.

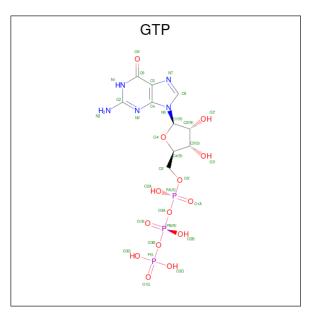

## 3 Entry composition (i)

There are 2 unique types of molecules in this entry. The entry contains 1376 atoms, of which 458 are hydrogens and 0 are deuteriums.

• Molecule 1 is a RNA chain called Class I RNA aptamer to GTP.

Mol	Chain	Residues		Atoms					Trace
1	٨	41	Total	С	Η	Ν	0	Р	0
	A 41	1331	393	445	163	289	41	U	

• Molecule 2 is GUANOSINE-5'-TRIPHOSPHATE (three-letter code: GTP) (formula:  $C_{10}H_{16}N_5O_{14}P_3$ ).

Mol	Chain	Residues	Atoms					
2	٨	1	Total	С	Η	Ν	0	Р
	1	45	10	13	5	14	3	

## 4 Residue-property plots (i)

These plots are provided for all protein, RNA, DNA and oligosaccharide chains in the entry. The first graphic is the same as shown in the summary in section 1 of this report. The second graphic shows the sequence where residues are colour-coded according to the number of geometric quality criteria for which they contain at least one outlier: green = 0, yellow = 1, orange = 2 and red = 3 or more. Stretches of 2 or more consecutive residues without any outliers are shown as green connectors. Residues which are classified as ill-defined in the NMR ensemble, are shown in cyan with an underline colour-coded according to the previous scheme. Residues which were present in the experimental sample, but not modelled in the final structure are shown in grey.

• Molecule 1: Class I RNA aptamer to GTP

Chain A: 100%

## 5 Refinement protocol and experimental data overview (i)

The models were refined using the following method: restrained molecular dynamics.

Of the ? calculated structures, 1 were deposited, based on the following criterion: ?.

The following table shows the software used for structure solution, optimisation and refinement.

Software name	Classification	Version
XPLOR-NIH	structure solution	2.9.2
XPLOR-NIH	refinement	2.9.2

No chemical shift data was provided.

# 6 Model quality (i)

### 6.1 Standard geometry (i)

Bond lengths and bond angles in the following residue types are not validated in this section: GTP

There are no covalent bond-length or bond-angle outliers.

There are no bond-length outliers.

There are no bond-angle outliers.

There are no chirality outliers.

There are no planarity outliers.

#### 6.2 Too-close contacts (i)

In the following table, the Non-H and H(model) columns list the number of non-hydrogen atoms and hydrogen atoms in each chain respectively. The H(added) column lists the number of hydrogen atoms added and optimized by MolProbity. The Clashes column lists the number of clashes averaged over the ensemble.

Mol	Chain	Non-H	H(model)	H(added)	Clashes
1	А	0	0	0	0
2	А	32	13	0	0
All	All	32	13	0	-

The all-atom clash score is defined as the number of clashes found per 1000 atoms (including hydrogen atoms). The all-atom clash score for this structure is -.

There are no clashes.

#### 6.3 Torsion angles (i)

#### 6.3.1 Protein backbone (i)

There are no protein molecules in this entry.

#### 6.3.2 Protein sidechains (i)

There are no protein molecules in this entry.

### 6.3.3 RNA (i)

Mol	Chain	Analysed	Backbone Outliers	Pucker Outliers	Suiteness
1	А	41/41~(100%)	40 (98%)	34~(83%)	0.00
All	All	41/41 (100%)	40 (98%)	34 (83%)	0.00

The overall RNA backbone suiteness is 0.00.

All RNA backbone outliers are listed below:

### 6.4 Non-standard residues in protein, DNA, RNA chains (i)

There are no non-standard protein/DNA/RNA residues in this entry.

### 6.5 Carbohydrates (i)

There are no monosaccharides in this entry.

### 6.6 Ligand geometry (i)

1 ligand is modelled in this entry.

In the following table, the Counts columns list the number of bonds for which Mogul statistics could be retrieved, the number of bonds that are observed in the model and the number of bonds that are defined in the chemical component dictionary. The Link column lists molecule types, if any, to which the group is linked. The Z score for a bond length is the number of standard deviations the observed value is removed from the expected value. A bond length with |Z| > 2 is considered an outlier worth inspection. RMSZ is the average root-mean-square of all Z scores of the bond lengths.

Γ	Mol	Tuno	Type Chain	Res	Link	Bond lengths		
		туре			LIIIK	Counts	RMSZ	#Z>2
	2	GTP	А	42	-	26,34,34	1.29	3 (11%)

In the following table, the Counts columns list the number of angles for which Mogul statistics could be retrieved, the number of angles that are observed in the model and the number of angles that are defined in the chemical component dictionary. The Link column lists molecule types, if any, to which the group is linked. The Z score for a bond angle is the number of standard deviations the observed value is removed from the expected value. A bond angle with |Z| > 2 is considered an outlier worth inspection. RMSZ is the average root-mean-square of all Z scores of the bond angles.

	Mol	Tuno	Chain	Res	Link	Bond angles		
		Type	Ullain			Counts	RMSZ	#Z>2
ſ	2	GTP	А	42	-	$33,\!54,\!54$	2.48	8 (24%)

In the following table, the Chirals column lists the number of chiral outliers, the number of chiral centers analysed, the number of these observed in the model and the number defined in the chemical component dictionary. Similar counts are reported in the Torsion and Rings columns. '-' means no outliers of that kind were identified.

Mol	Type	Chain	Res	Link	Chirals	Torsions	Rings
2	GTP	А	42	-	-	$0,\!18,\!38,\!38$	$0,\!3,\!3,\!3$

Mol	Chain	Res	Type	Atoms	Ζ	Observed(Å)	Ideal(Å)
2	А	42	GTP	C6-N1	3.30	1.38	1.33
2	А	42	GTP	C8-N7	2.78	1.29	1.34
2	А	42	GTP	O4'-C1'	2.66	1.44	1.41

All bond outliers are listed below. They are sorted according to the Z-score.

All angle outliers are listed below. They are sorted according to the Z-score.

Mol	Chain	Res	Type	Atoms	Ζ	$\mathbf{Observed}(^{o})$	$Ideal(^{o})$
2	А	42	GTP	C5-C6-N1	8.61	111.66	123.43
2	А	42	GTP	C2-N1-C6	5.86	125.23	115.93
2	А	42	GTP	PA-O3A-PB	4.44	117.59	132.83
2	А	42	GTP	PB-O3B-PG	4.31	118.03	132.83
2	А	42	GTP	C3'-C2'-C1'	3.57	106.35	100.98
2	А	42	GTP	C2-N3-C4	2.83	112.13	115.36
2	А	42	GTP	N3-C2-N1	2.54	123.84	127.22
2	А	42	GTP	O2G-PG-O1G	2.38	120.02	110.68

There are no chirality outliers.

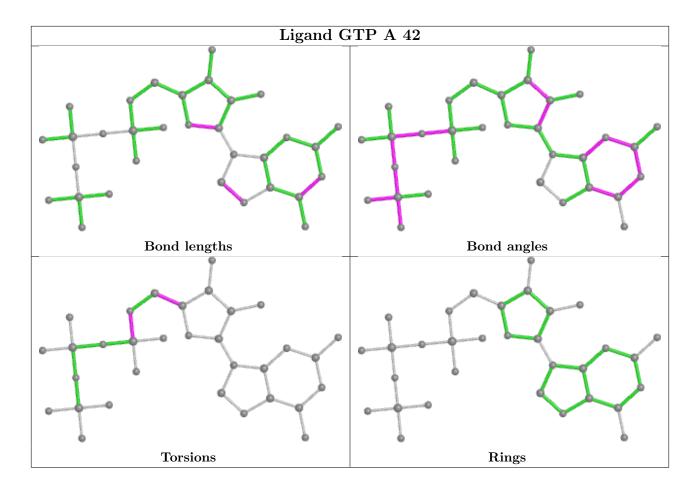

There are no torsion outliers.

There are no ring outliers.

The following is a two-dimensional graphical depiction of Mogul quality analysis of bond lengths, bond angles, torsion angles, and ring geometry for all instances of the Ligand of Interest. In addition, ligands with molecular weight > 250 and outliers as shown on the validation Tables will also be included. For torsion angles, if less then 5% of the Mogul distribution of torsion angles is within 10 degrees of the torsion angle in question, then that torsion angle is considered an outlier. Any bond that is central to one or more torsion angles identified as an outlier by Mogul will be highlighted in the graph. For rings, the root-mean-square deviation (RMSD) between the ring in question and similar rings identified by Mogul is calculated over all ring torsion angles. If the average RMSD is greater than 60 degrees and the minimal RMSD between the ring in question and sufficient the outliers are highlighted in purple. The color gray indicates Mogul did not find sufficient equivalents in the CSD to analyse the geometry.

### 6.7 Other polymers (i)

There are no such molecules in this entry.

### 6.8 Polymer linkage issues (i)

There are no chain breaks in this entry.

# 7 Chemical shift validation (i)

No chemical shift data were provided
