3 Residue-property plots (i)

These plots are drawn for all protein, RNA, DNA and oligosaccharide chains in the entry. The first graphic for a chain summarises the proportions of the various outlier classes displayed in the second graphic. The second graphic shows the sequence view annotated by issues in geometry and electron density. Residues are color-coded according to the number of geometric quality criteria for which they contain at least one outlier: green = 0, yellow = 1, orange = 2 and red = 3 or more. A red dot above a residue indicates a poor fit to the electron density (RSRZ > 2). Stretches of 2 or more consecutive residues without any outlier are shown as a green connector. Residues present in the sample, but not in the model, are shown in grey.

Bond lengths and bond angles in the following residue types are not validated in this section: XYP, ZN, CL, MRD, CA, MPD

| Mal | Chain | Bond | lengths | Bond | angles |
|-----|-------|------|----------|------|----------|
| MOI | Chain | RMSZ | # Z > 5 | RMSZ | # Z > 5 |
| 1 | A | 0.46 | 0/2645 | 0.62 | 0/3597 |
