## Data quality ?

### Model quality ?

For models with atomic structures, molprobability analysis is performed. For models with coarse-grained or multi-scale structures, excluded volume analysis is performed.

#### Standard geometry: bond outliers ?

Bond length outliers can not be evaluated for this model

#### Standard geometry: angle outliers ?

Bond angle outliers do not exist or can not be evaluated for this model

#### Too-close contacts ?

The following all-atom clashscore is based on a MolProbability analysis. All-atom clashscore is defined as the number of

clashes found per 1000 atoms (including hydrogen atoms). The table below contains clashscores for all the models in this entry.

Model ID	Clash score	Number of clashes
1	4.68	17

All 17 close contacts within the same asymmetric unit are listed below, sorted by their clash magnitude.
